

Louise Livingston PhD

Educational Neuroscientist

Head of Training at the Maria Montessori Institute, London

Montessori Education and the Neuroscience of Learning

Thursday
17 September
17:30-19:30

*Online via Zoom,
with Greek translation*

Participation fee: 10€

How do children really learn?

Over the past several decades, neuroscience has transformed our understanding of how children learn and develop. We now know that the young brain is extraordinarily adaptable and is shaped through active, meaningful engagement with the environment.

Dr Louise Livingston will explore how the Montessori approach aligns with what we now know about the brain and learning: the role of movement and the senses, freedom of choice, repetition, concentration, and the child's active engagement.

By bringing Montessori education into dialogue with contemporary neuroscience, we will explore how a carefully prepared environment can support independence and deeper learning - working with the developing brain rather than against it.
